Glucocorticoids are steroid hormones released in response to stress. The most important physiological actions of glucocorticoids are to influence the state of energy mobilization and expenditure in response to stress. In addition, glucocorticoids influence many aspects of the stress response, including blood pressure, fluid balance, learning and memory, the immune response, cardiovascular function, and behavior. The endocrine and paracrine effects of glucocorticoids are mediated by their binding to a glucocorticoid receptor protein. Recent studies demonstrate that many of the effects of glucocorticoids are mediated by members of the Janus kinase family of cytoplasmic tyrosine kinases.Q: PhoneGap Android Plugin - Drawable Sprite Sheet I'm working on an Android app that uses PhoneGap for development. I want to load an image and use the 'loadImageFromAssets' method in the plugin. My question is, are the resources from the assets folder files I can't modify, or are there actually ways to draw an image in the draw method? I've tried the following code, but the draw method doesn't seem to be able to do anything with this image: var drawable = { src: 'drawable/sprite-sheet.png', id: 'sprite-sheet' }; ScordovaSprite = new Spritesheet(drawable); ScordovaSprite.init(); Thanks in advance! The microbiome (or microbiota) of the body is made up of these microscopic organisms, and is generally considered a key contributor to many diseases. Specifically, the microbial flora found in the mouth, lungs, gut and elsewhere may play a role in cancer initiation, progression, and metastasis. We have previously sequenced the microbiome of head and neck squamous cell carcinomas (HNSCC) to characterize the microbial taxa associated with this cancer, and have found that several known pathogens are associated with this disease. We are now developing methodologies to selectively enrich for microbial taxa in clinical specimens to study the link between the microbiome and HNSCC. In this talk, we will describe the methods we are using to sequence clinical specimens and characterize the microbiome of clinical specimens from HNSCC patients and controls. We will also describe our work to detect and identify oral microbes in saliva and esophage
