Q: Do there exist smooth functions ϕ with no critical points or only one critical point in \mathbb{R}^2 ? Let $\phi: \mathbb{R}^2 \rightarrow \mathbb{R}$ be a smooth map such that $\nabla \phi$ is a gradient field. If c is a critical point of ϕ , then $\nabla \phi(c) = 0$ for all $v \in T_c(\mathbb{R}^2)$. Would it then be possible to find a smooth function ϕ with no critical points? What if we only require one critical point? A: No, this is impossible. If ϕ has no critical points then $\nabla \phi$ vanishes everywhere, so $\nabla \phi = 0$ for all $v \in \mathbb{R}^2$. We use $\nabla \phi = 0$ to get the contradiction $0 = 0$. Nucleotide 5'-triphosphate substrates for the activation of the purine-specific ribonucleotide reductase of Escherichia coli.
