KeyM4U is a tool designed to help you organize your music files by enabling you to define, through a series of macro assignments, which audio files you want to assign to which specific musical track. What does KeyM4U do? By using KeyM4U you can assign a series of audio files to a particular track in a much simpler manner than if you were to use another piece of music software. For instance, you could add the melodies of your songs to the right, the chorus and the percussion instruments to the left, the vocals to the very left, the various vocal effects to the right, etc. With KeyM4U you also have the possibility of moving from one track to another by just pressing a single button. How can KeyM4U help me? KeyM4U can be used in a number of ways. You can use it to organize your music files as stated above, which is the first option. You could also use it to put more

tracks on your CDs if you don't have enough space in the master recording. This can be done by selecting the auto-format feature, which creates a CD audio file from the master audio and then creates a new track in the CD audio. You can also use it to create your own CD. In this case, you would use the audio file saved in the main window and then save it as a new audio track. You can also use KeyM4U to organize your music files in the order that you want to listen to them in your CD player, so that you can play them in the order you want and in an automatic or manual sequence. In conclusion, KeyM4U is a software tool that can save you a lot of time. It also gives you more space to organize and copy your music files.
