Spam Reader is an efficient anti-spam plugin for Microsoft Outlook that uses a Bayesian-based machine learning algorithm to filter messages. The plugin monitors multiple inboxes at once and can distinguish between good and bad messages. All spam and unwanted messages are sent to the appropriate spam folder where they will remain unread until they are removed from the spam folder or marked as read. Spam messages will remain in the Inbox unless they are whitelisted. Spam Reader can learn to identify spam from general messages and can be applied to as many inboxes as desired. It uses a Bayesian filtering engine to make sure that all emails that are sent to your Outlook account are either spam or are ignored due to certain characteristics that are contained in the email. It monitors multiple mailboxes at the same time and can learn about new email addresses and delete them if they are found to be spam. The program has a whitelist that you can use to keep spam from infiltrating your 'spam-free' mail. All Spam Shield features are available from the built-in Outlook tray icon or from the menu bar. 0 Freeware Spamware Alert 2.7 Spamware Alert is an easy to use spam prevention system that turns ordinary email into a spam-proof treasure trove. As an additional security measure, Outlook checks to see if the sender's e-mail address has a valid, whitelisted KMX (Know of malicious or spammy computer) key number. This key number is used by many of the malware programs that want to disguise their traffic. For example, the virus program MacWorm uses a KMX code. The account's KMX number is verified when you use your account in a web browser, or when you get a new computer. Some malware programs have started disguising their traffic by sending it from legitimate and well-known sources such as web mail, or legitimate e-mail accounts. We found that some of these programs are sending spam messages that look like they are coming from your legitimate e-mail account. As a result, you could receive a message from an unknown sender in your spam folder. What if your KMX number is missing, is inactive, or has been stolen? In that case, the account is not under attack, and you might want to change your KMX number. Since you can only enter two different KMX numbers, you should choose your second number carefully. Use a number that you are happy to lose. Your KMX number is used as the basis for determining your IP address. If you have multiple addresses on your account, and you don't want to have to change your KMX number for each one, you might want to create a backup KMX number. All your previous emails will be sent from this number, but it won't be checked for spam activity. I've got an e-mail account with a webmail that can be accessed through my favorite e-mail client.
