Photo by Trent James. Basic Photoshop Basics You may not be able to use Photoshop to create images, but you can learn the basics and enjoy simple effects. Start by using Photoshop's basic tools, layers, and filters to create simple and straightforward images. Photoshop was developed in 1990 for the Mac by Adobe. It is now at version 14.0. Adobe Photoshop has become the

---

industry standard for image manipulation programs. The program has become so widespread and useful that it is more commonly referred to as a verb: "We photoshopped his picture." User-Friendly Benefits of Photoshop The goal of Photoshop is to provide users with a creative tool for image manipulation and editing. Two key features that make it easy for people to use Photoshop are the use of layers and the ability to use filters. Layers allow users to layer

---

different images and manipulate them separately. Filters let users change the colors of an image. An effect can be applied to a picture by applying a filter to the image layer. Layers A main feature of Photoshop are the layers. A layer is the most basic component of a Photoshop document. The layers of an image are stacked one on top of each other, with each one being a separate image. You can manipulate layers separately and use them separately from one another. Layers can be named and

---

labeled to make it easier to work with them. Each layer can have a unique fill color and an opacity level. Opacity is a word describing the level of how transparent or opaque an image is. When Photoshop layers are combined, they become a complete image. The layers act like separate layers, but when combined they create a unique image. When you combine layers, they become a complete image. The major advantages to using layers is the ability to manipulate

---

each layer separately and the fact that each layer, when combined, creates a unique and original image. Other benefits to using layers include: Accessible undo and redo Saves time and is less complicated for beginners Easy control Shorter download times for images Filters Filters are similar to layer effects. They can change the colors of an image. Photoshop has filters designed to provide image-editing assistance for beginners. Filters are one of the key components of

---

Photoshop. Filters can be applied as a layer on top of an image

Schwartz Center The Schwartz Center for the Arts (commonly known as the Schwartz Center), located at the University of Maryland, College Park, is a performing arts hall that hosts musical and theatrical performances. With of indoor space, the Schwartz Center can seat 500 people for performances. History In 1930, John W. McConnell, an English professor

---

at the University of Maryland, was principal founder and first director of a drama club called the Laurel Players, named after Laurel, Maryland. The theatre group established a small theatre, a building on the campus of Maryland College, just across South Campus Drive from the Hilltop. In 1943, John W. McConnell died suddenly of a cerebral hemorrhage at the age of 44. During the early years after his death, the Laurel Players continued to perform. The

---

building was named the McConnell Memorial Theatre. Its director was George Tewes. McConnell's widow, Louise McConnell Schofield, who was originally from Union City, New Jersey, a suburb of Newark, New Jersey, was instrumental in the organization of a memorial fund for the theatre and its operations. She was named its first director. She became a trustee of the college and the theatre and a friend of President James T. Young. In 1948, Louise

---

McConnell Schofield decided to house the theatre group under the University of Maryland and turned it over to the college. She served as its first director until 1966. In 1962, the government of the United States contributed \$10,000 to develop the building into a performing arts complex. The building was renamed the Louise G. Schofield Theatre. In the years between 1963 and 1966, the school's musical theatre department was added and a gifted team of faculty and

---

students made significant contributions to the theater program. The university's scenic arts department was formed in 1966. James McMurtry, then director of scenic arts, was among those who contributed to the addition of the Hayes Little Theatre in 1970. In 1967, Louise G. Schofield died, aged 84. In the fall of 1968, the building was renamed the Louise G. Schofield Theatre. Louise Schofield was remembered in an inscription on the facade. In the spring of 1970,

---

dramatic and visual arts professor William Fitzsimmons became the director of the theater. Soon after, Fitzsimmons was named the theater's associate director

The major findings are; 1) The causative organism isolated from 3.4% of patients with severe periodontitis (Type 2 diabetes mellitus (30.1%), hyperlipidemia (10.6%), osteoporosis (8.3%) and gout (7.7%)). 2) Severe

---

periodontal disease in these patients is associated with impaired glucose tolerance, reduced glucose-induced insulin secretion, increased blood pressure, and increased serum levels of triglycerides, cholesterol and LDL-cholesterol. 3) Patients with periodontitis-associated diabetes are more likely to have elevated fasting serum levels of apolipoprotein A-1, cholesterol and triglyceride when compared to patients without periodontitis. 4) Patients with periodontitis and

---

elevated glucose or cholesterol levels in the fasting state have increased atherosclerotic plaque levels in the peripheral circulation, including carotid intima-media thickness. There is also an increased burden of pathological arterial changes in sub-epicardial coronary arteries.

5) Patients with periodontitis have high levels of the inflammatory marker C-reactive protein (CRP). 6) Coronary arterial disease (CAD) and periodontitis are characterized by

---

a 2-3 fold higher prevalence of both traditional risk factors and pathological processes as compared to patients without periodontitis. These new findings are based on samples collected as part of a study designed to determine whether conventional and novel risk factors predict the development of severe periodontitis in an African American population. The overall objectives of this study are to determine whether periodontal disease status can be used to

---

predict the risk of CAD and whether this risk can be mitigated. Methods will include a combination of case-control and longitudinal study designs. The case-control study will be used to evaluate the clinical, biochemical, and vascular risk factors associated with the development of severe periodontitis. The longitudinal study will evaluate participants over time to determine the characteristics associated with the progress of severe periodontitis and the

---

vascular changes in those who are initially free of severe periodontitis and subsequently develop severe periodontitis. In the past, a surface of an electrolytic copper pipe used for an underground water pipe or a drain pipe is oxidized by electrolysis to form a film of copper oxide on the surface of the electrolytic copper pipe. Therefore, corrosion resistance is improved. Further, the copper oxide film is covered with a scale which is the precipitate of copper

---

and oxygen. Therefore, the sealing performance is improved
