===== edtechdev I'm doing some data
mining on Google Finance using a lot of quant
finance math. There's a lot of data for even
the most frequent questions, but it is just a
few small datasets in each topic, and Google

It's almost impossible to get any meaningful
results. It doesn't feel like Google BigQuery is
designed by the people who already get
finance models working. The feedback forms
aren't sensitive to financial questions, so you
get hardly any useful feedback. I'd
recommend looking at the Weaveworks
DataSmart for finance, which is designed for
financial questions. Also, the following hasnt
