What's New in the AutoCAD?

Using new Markup import and Markup Assist in AutoCAD 2023, you can easily incorporate customer or supplier feedback into your designs. With Markup Import you can import drawings directly into an AutoCAD project using one of the following file types: PDF, Word, or PowerPoint. With Markup Assist, you can use an Autodesk Markup Assistant plugin to open the Autodesk Markup Assistant to display the pages of the PDF, Word, or PowerPoint document and make annotations on the drawing. The plugin automatically imports all of the annotations as marks. Once you've imported a Markup Assist document, you can view the annotations in the 3D viewport (as both draft and review) or in the AutoCAD Text Editor. Markup editor: Using the new Markup editor, you can open Markup Assist documents and annotate designs with comments, comments on comments, notes, and other markers. All of these elements will appear in your 3D viewport and in the AutoCAD Text Editor. In addition, you can use notes and annotations to: search for drawings or drawings to open add comments to a drawing, or mark up your design comment on or highlight a design element A new property, Markup Note Color, lets you select the color of the Note or Markup marker when you make them. This helps you to distinguish one mark from another. You can also change the font size and color of the note marker, if you want. New Stylus Language: Use new Stylus LanguageList properties to control which Stylus commands are available in the Stylus viewport and Text Editor. The Stylus LanguageList property lets you modify the list of Stylus commands available to you in the Stylus viewport. You can also include or exclude commands from the list. You can use the Stylus LanguageList to make changes that can't be made through the interface. For example, you can use it to make changes in Stylus that would have been difficult to make through the interface, such as changing the pen color in the 3D viewport or changing the color of lines and boundaries. You can also use the Stylus LanguageList to change the behavior of the Stylus commands you use most often. For example, you can enable or disable commands in the Stylus
