## **What's new:**

**The most radical and successful radical revolutionaries of our age have, in their different ways, all dealt in some form or other with the problem of how to die in a modern, bourgeois society. Their answers have often taken the form of self-cleansing, of re-integrating into a millenary system of belief and practice, of rejecting the technical and material conditions of a completely bourgeois system of survival and redressal, and of fusing the particular with the general cultural revolution in action. As the two major phenomena of the Cuban revolution and the Chinese Cultural Revolution demonstrate, this new communal consciousness, when it has a mass base, produces the highest mass radicalism that we have known for, if not a millennium. It is, I believe, because of these insights, and for the generality of that knowledge of the human condition about which the foregoing paragraphs have dealt, that Che Guevara, struggling for his life in an archive in Argentina, managed, within nine days of the act of settling his "shoulder to shoulder with humanity" account against cancer, despite the adversities, and mortalities not against but by his body, to select 7 January 1967 as the time and the place, the principal period and occasion, as the occasion, for, and for one final message at the risk of a hurricane of death to be sent. Of the communes no group has taken birth in a more revolutionary fashion than the Black Panther Party (BPP). The legacy it represents is most powerful, and it has exploited it with the greatest personal insightfulness and ingenuity since the mass occupancy of its birth neighborhood of the Watts, Los Angeles ghetto. It not only took advantage of the prerevolutionary ideological shifts in California and neighboring states, but it also had its station of growth and confrontation in the most revolutionary and destabilizing era for capitalism since the immediate post-Civil War era. As the work of the Panthers is by no means complete, BPP's growth, and its statement and outlook, are both at least as yet unimpeded.**

---

**And while I would regard any attempt to apply theoretical or “objective” standards to an ideological process as a very dangerous and incalculable enterprise, I think at least a few such standards might be applied to this revolutionary movement on the basis of what I have so far seen and read. Barack Obama, one of the most astute and perceptive observers of national affairs, when he came to America from Kenya in February 2004, was immediately impressed**

The State of Chile Has Been Using Bitcoin for Payments Since the Existence of Bitcoin A bill passed by the state of Chile could make them the second nation to accept bitcoin. Governor Jorge Castañeda signed the bill on April 11, 2014. The bill has passed on Thursday, April 10th. From the beginning of Bitcoin, its security has been under attack by governments all over the world. One of those countries was Argentina. Unlike other governments, which take steps to avoid supporting bitcoin, the Argentinian government blocked the three main wallets that allowed users to purchase bitcoin and sell them to later on. There are banks in the US and Europe that made transactions with bitcoins, so once the Argentinians blocked the international wires, all the currency was blocked as well. This only proved that they were not willing to support bitcoin, they just wanted to have the power over everything. Only two countries faced less problems than the Argentinians. The first one is Uruguay, and its president expressed interest in bitcoin in 2013. Soon after, the Uruguayan government didn't block the international wires as well. This helped the Argentinians to figure that the Uruguayan government was encouraging and supporting bitcoin. Perhaps they took some lessons from Australia, a country which expressed interest in bitcoin and in 2016 offered it as a payment method for their consumers. There were some bitcoin banks in Australia, including the largest one located in Perth. In fact, it even made its first return with a beehive HiveBT. But in the US there was a problem. As we can see, the US is the first country that prohibited bitcoin because of its people's fear.
