A: There are two other games in the Otogi-Jushi series, but according to Wikipedia they take place after the events of Ranma 1/2: Otogi-Jushi!! Kumamon. I think Ranma 2 will be the first in the series, not Otogi-Jushi!! Kumamon. Ranma 1/2: Otogi-Jushi!! is a 2011 interactive anime film based on the manga of the same name by Rumiko Takahashi. The film is set after the events of Ranma 1/2 (1994–1996). Q: In what way would one prove that a linear transformation is the result of a particular matrix? For example, Let $T:\mathbb{R}^3\to\mathbb{R}^3$, with $T(x,y,z)=(2x+y+2z,2y+z-3,3z-y)$ To express it's matrix, we'd do something like this: $T = \begin{bmatrix} 2 & 1 & 2 \\ 0 & 2 & 1 \\ 0 & 0 & 3 \end{bmatrix}$ I've noticed, though, that often when one writes a linear transformation as an m-by-n matrix, there are more variables in the transformation than there are dimensions, like in my example. The dimensions I see so far is 3 and 3. It's not clear to me what aspects of a linear transformation I'm allowed to prove. E.g. that it is in the form of the matrix, and whether it is important for the proof that those dimensions exist. A: If T is a linear transformation from a vector space V to a vector space W then we define

What's new in Devil In The Capital:

I Like to Play: Railroad Tycoon II Railroad Tycoon II is a relatively simple game I like to play. It's fun, and I like to be a little Nintendo when I play. It lets me wander off into the past, and it lets me take a little vignette from the past and put it to use. What it's about: Railroad Tycoon II is a simulation game where you can design a railroad empire. You have a computer-generated railroad, with a track that can be laid out in a certain pattern. Trestles and viaducts can be built, as can locomotives and freight cars. A perk for taking a little time with it is that you can make sense of the whole computer game without the computer taking too much of your time. It's a challenging game — arguably one of the hardest in the Tycoon series — and it does a fair job of reminding you to keep expenses within reason. Why I like to play it: For the most part, I don't spend much time playing railroads. I have a pretty in-depth model of the Burlington Northern Railroad almost to the point of being unbeatable. But I like the fact that it's a challenge to build a railroad efficiently — a game with just a little more responsibility than building a society from scratch, or writing a book of high fiction. I think I have computers pretty good. I can pretty easily make spreadsheets track the profitability of my stocks and bonds. I've never been very good at fiddling with the American Society of Civil Engineers' surveyors' standards. I've had too many baby-thieving activities to be known as good at the business of crossing the United States. But I do pretty well at investing, and at keeping a functioning business. That means that I like Railroad Tycoon II. I like the challenge of it. I like that I can have a little time with it. I like that I can be on the level where

I can actually design a railroad empire. I like the silly background facts. My favorite is that "aluminum production in the U.S. has a 40-year cycle." From an economic standpoint, it may be right. I heard that from someone who works for a big manufacturer. But 40 years? Gah! I like to suppose that aluminum production was superior to that in 1968 — and that they
