Von Thomas Hahn, Berlin Gerade wird ein Gerichtsverfahren begonnen, in dem ein Polizist und seine Kollegen vom Amt zur Rechenschaft gezogen werden sollen. An diesem Mittwoch, 2. Juli, wird das Verfahren beginnen, das von einem bis dahin überlasteten Richterkollegium begonnen wurde. Am Donnerstag müssen sich Richter des Berliner Verwaltungsgerichts dazu treffen. Der Polizist soll dem Richterkollegium im Jahr 2011 Beweise vorlegen müssen, das das Amt gehackt hat. Der Polizist stieg am 27. März 2011 von einem seiner Hubschrauber zurück, um seine Kollegen zu ermöglichen, den Rufbereich des LKA-Büros am Tegeler Flughafen mit Überwachungskameras zu überwachen. Der Pilot räumte dort auf. Dabei wurde auf einer Videokamera eine 25-jährige Frau gesehen. Zwei Jahre später, im November 2013, bekamen die Polizeibeamten bei einer Durchsichtung auf dem Flughafen eine Computer, die auf dem Rechner der Frau lagen, weil sie dem Angeklagten zugeschrieben wurde. Der Fall ist dennoch ein Fall von Anwendung des Telekommunikationsrechts, weil das Bild, welches auf der Computerfestplatte angezeigt wurde, bei einem Geschäft aufgefunden wurde. Der Angeklagte sagt, diese Bilder seien ihm nicht bekannt gewesen. Und auch die beiden Beamten, die sich ans Amt gewendet haben, weil sie keine Geschichte hinbekommen hätten.

In a conventional configuration, an energy storage system of an electric vehicle includes a rechargeable battery, and battery pack for supplying or receiving direct current (DC) power to or from the rechargeable battery. The battery pack is built in a vehicle, and is connected to a DC power supply through a DC cable. Furthermore, the battery pack is typically a massive assembly of a large number of cells. Each cell (or unit) has a terminal for receiving DC power from the DC power supply and a terminal for supplying power to electric loads of the vehicle. The large number of cells is assembled in a subassembly structure to form the battery pack. The subassembly structure also has a DC cable for connecting the terminals of the cells together. Large-scale battery packs require higher processing and assembling costs. To realize a smaller battery pack, such as a battery pack for use in a lower cost electric vehicle, designers have tried to connect the cells through an energy transfer device that uses different battery technologies. One type of energy transfer device comprises a plurality of energy exchange terminals connected to cells through an electrolyte and a voltage-converter to provide a high output voltage, which is suitable for AC-charging a battery. Such energy exchange devices comprise energy transfer terminals and a transformer. The transformer is connected to the energy exchange terminals to transfer power between the battery and the energy exchange terminals. However, in this energy transfer device, the transformer is also a large assembly. It is desirable to provide alternative energy transfer devices with multiple energy exchange terminals capable of minimizing the volume of the energy transfer device to overcome at least the above disadvantages.Sponsor Saturday, May 4, 2014 I didn't make it to the start of Luminaria 14 in the SDF, but very
